

Cleaner

Separator
D 102

General Description

The Cleaner Separator **DENIS** type D102 has been designed for the effective and efficient cleaning of all cereals and grains whether at the harvest intake or final grading. One pass through the D102 assures a double screening of the product complete with primary and secondary aspiration, guaranteeing trouble free storage and a better quality. The following advantages are built in:

Robust and compact: Monobloc construction and a minimum ground loading

Simple and with proven reliability: easy to operate and adjust, brush cleaning of the screens, discharge of the heavy trash by screw, completely guarded

High performance, flexible and economical: using twin screen, double aspiration, large range of different size screens to suit a wide range of products, unique drive system, low maintenance requirement

Well prepared finish: each part of the cleaner is degreased, prepared with a phosphate primer and then has the final coat of paint oven baked at 180°C

Accessories

- support legs for sacking attachments
- sacking attachments
- good grain hopper
- exhaust air ducting
- square bends etc.....

Large inlet reservoir ensuring even flow of the grain

Feed roll to ensure even feed across machine

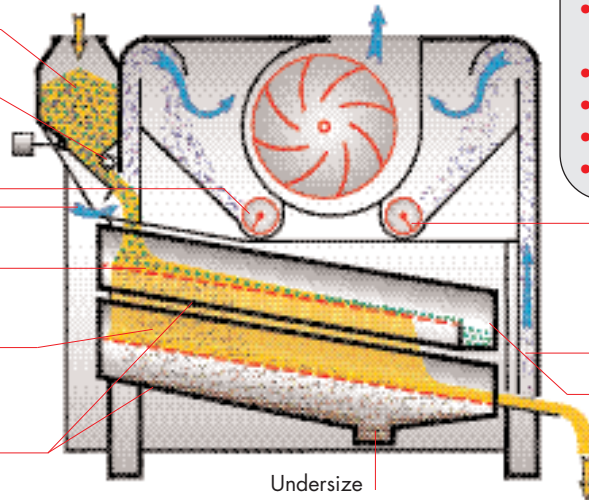

Discharge by the trash screw of trash from the first aspiration, supported at drive end only

First aspiration

The upper screen separates the oversize, cleaned by moving brushes

The lower screen holds the good grain, allowing the undersize to pass through

Removable screens are fitted into independent and balanced decks, mounted on bearings and rubber pads, which ensure a silent and vibration free operation

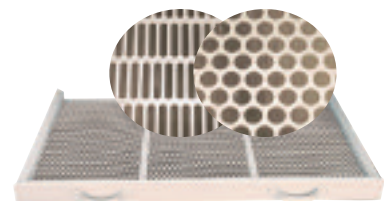

Characteristics

D 102	Length	Width	Height	Power	Airflow	T/H Wheat		Net weight (kg)
						commercial	seed	
Basic cleaner	2.15 m	1.50 m	2.20 m	2.2 kW	5,400 m ³ /h	10 t/h	3 t/h	722
With support legs	2.50 m	1.50 m	3.10 m					798

The cyclone is indispensable to ensure the collection of the lighter trash in the exhaust air

Interchangeable screens, in metal, with extremely precise holes, either slotted or round, for common cereals, maize, peas, sunflower, coffee, rice, oil seeds, linsee, clover, lucerne, etc...

CE All our equipment meets the legal safety requirements
